Instruments Maintenance and Control

REF: O1377 DATE: 18 - 29 August 2024 Venue: Dubai (UAE) - Fee: 9915 Euro

Introduction:

This training program provides participants with comprehensive knowledge and skills to maintain and control industrial instruments effectively. It empowers them to optimize instrumentation for better operational efficiency.

Program Objectives:

By the end of this program, participants will be able to:

- Understand the fundamentals of industrial instrumentation.
- Gain proficiency in preventive and corrective maintenance techniques.
- Learn calibration and testing procedures for instruments.
- Develop skills in troubleshooting and fault diagnosis.
- Implement best practices for instrumentation control and optimization.

Target Audience:

- Instrumentation engineers and technicians.
- Maintenance and reliability engineers.
- Process control engineers.
- Plant operators and supervisors.
- Professionals seeking to enhance their skills in instrumentation maintenance and control.

Program Outline:

Unit 1:

Fundamentals of Industrial Instrumentation:

- Introduction to Instrumentation Systems.
- Types of Instruments and Their Applications.
- Principles of Measurement and Control.
- Instrumentation Standards and Regulations.

- Key Components and Their Functions.

Unit 2:

Instrumentation Calibration:

- Importance of Calibration in Instrumentation.
- Calibration Procedures and Standards.
- Tools and Equipment for Calibration.
- Documenting Calibration Results.
- Case Studies on Calibration Best Practices.

Unit 3:

Preventive Maintenance of Instruments:

- Routine Inspection and Maintenance Procedures.
- Cleaning and Lubrication Techniques.
- Preventive Maintenance Schedules.
- Maintaining Instrumentation Records.
- Best Practices for Preventive Maintenance.

Unit 4:

Corrective Maintenance and Repair:

- Identifying and Diagnosing Instrument Failures.
- Corrective Maintenance Procedures.
- Replacing and Repairing Instrument Components.
- Testing and Validation After Repair.
- Case Studies on Corrective Maintenance.

Unit 5:

Instrumentation Control Systems:

- Overview of Control Systems and Automation.
- Programmable Logic Controllers PLCs.
- Distributed Control Systems DCS.
- Supervisory Control and Data Acquisition SCADA.
- Integrating Instruments with Control Systems.

Unit 6:

Troubleshooting and Fault Diagnosis:

- Common Instrumentation Issues and Causes.
- Troubleshooting Techniques and Tools.
- Root Cause Analysis.
- Developing Troubleshooting Guides.
- Examples and Case Studies.

Unit 7:

Advanced Instrumentation Techniques:

- Digital and Smart Instruments.
- Wireless Instrumentation.
- Advanced Sensor Technologies.
- Instrumentation in Hazardous Areas.
- Emerging Trends in Instrumentation.

Unit 8:

Process Control and Optimization:

- Principles of Process Control.
- Control Strategies and Tuning.
- Optimizing Instrumentation for Process Efficiency.
- Performance Monitoring and Improvement.

- Implementing Advanced Process Control APC.

Unit 9:

Safety and Compliance in Instrumentation:

- Safety Standards and Regulations.
- Hazardous Area Classification and Safety Practices.
- Ensuring Compliance with Industry Standards.
- Instrumentation Safety Systems.
- Case Studies on Safety and Compliance.

Unit 10:

Best Practices and Continuous Improvement:

- Best Practices in Instrumentation Maintenance and Control.
- Implementing Continuous Improvement Programs.
- Training and Development for Instrumentation Staff.
- Benchmarking and Performance Metrics.
- Future Trends and Innovations in Instrumentation.
